Metabolism of Buildings

Professor William W. Braham
Weitzman School of Design, University of Pennsylvania
Director, MSD-Environmental Building Design

Thursday, February 27
11:30-12:30
Burke Auditorium, Kroon Hall

Food will be provided--please arrive by 11:15 to get food before the talk

Building construction and operation account for over 40% of energy use and carbon emissions in the US. Professor Braham will discuss new approaches to energy-efficient and low-carbon design, considering both the historical development of our energy intensive approach to construction and the full range of work and resources that contribute the metabolism of contemporary buildings.

Interested students can participate in a small group discussion with Professor Braham after the presentation in Kroon 319 (1:00-1:30).

Please contact bill.pedersen@yale.edu with any questions regarding this event.
